

Acqua & Sole is part of the Horizon 2020 SYSTEMIC project which is demonstrating a variety of technologies for the recovery of mineral nutrients (N, P, K) and works on the production of a number of (nutrient-depleted) organic soil improvers and fertilisers. The implementation of nutrient-recovery technologies allows plant owners to process biowaste into user-specific products for the regional market.

Experimental trials at Acqua & Sole showed positive effects on cereal growth, allowing end users of digestate and ammonium sulphate to reduce the amount of chemical fertilisers.
